

Permanent Plate Magnets

ERIEZ

Permanent Plate Magnets

Eriez Permanent Plate Magnets provide dependable and economical solutions to problems associated with tramp iron contamination in processing lines. Ceramic or Rare Earth Plate Magnets installed in chutes, spouts, ducts, pipes, or suspended over conveyors remove tramp iron to help stop costly shutdowns associated with machinery damage, avoid spark-caused fires and explosions, prevent product contamination and improve product purity. The magnetic field penetrates the product flow and grabs tramp iron as it passes, holding it tightly to the magnet surface until it is removed during the cleaning process.

STANDARD DESIGN AND CONSTRUCTION

ALL STAINLESS STEEL

For best resistance to wear from corrosive materials and atmospheres.

MILLED STAINLESS STEEL STEP

400 series stainless steel 1/2" high tapered step provides a magnetic and physical barrier to provide superior removal and retention of fine ferrous contamination.

WELDED CONSTRUCTION

Compact and rugged design is easy to install and will last for years of continuous service in the most demanding environments.

MOUNTING HARDWARE

Standard units include a heavy duty stainless steel hinge, zinc plated latch and latch mounting hardware for simple installation and easy maintenance.

Step holds ferrous material from product flow.

APPLICATION GUIDE

	Fine Ferrous Contamination	Small Tramp Iron	Medium and Large Tramp Iron
To Remove			
Choose Our	Rare Earth+ or Xtreme Rare Earth+ Model	MaxiPower or SuperBrute for Suspended Applications	SuperPower or BrutePower for Suspended Applications

OPTIONAL FEATURES

Sanitary Construction

Identical to the standard magnets but manufactured to contain no pits, cracks or crevices, in accordance with accepted sanitary standards.

Fixed or Suspended Applications

We can provide the unit without a hinge and incorporate a flange bolt hole pattern or lift lug for easy installation.

Stripper Plates

Non-magnetic stainless steel covers hinge on and off the magnet face to provide a quick and positive discharge of collected tramp metal.

PERMANENT PLATE MAGNET MODELS

SuperPower - 2-1/16" thick, projects 2 to 3"

Our most popular ceramic unit removes tramp metal from a variety of heavy duty applications. SuperPower creates a powerful magnetic field projecting 2–3" (50–75 mm) into a burden to remove large tramp iron from product flows.

MaxiPower - 2-11/16" thick, projects 3 to 4"

This extra heavy-duty ceramic magnet incorporates 75% more magnet material in a thicker and longer plate so feed material is exposed to the magnetic field 40% longer than our next closest size. MaxiPower creates a deep magnetic field that will project 3–4" (75–100 mm) into a burden to remove both small and large tramp iron.

Rare Earth+ - 1-3/16" thick, high holding force

Rare Earth+ Magnetic Plates are smaller than conventional magnets, but these magnets create a field so powerful that wash off is virtually eliminated. They are ideal for food and pharmaceutical applications where fine particles can contaminate products.

Xtreme Rare Earth+ - 2-1/16" thick, maximum holding force

When deeper product depths and higher suspension heights are required, Xtreme Rare Earth+ Magnets provide maximum separation performance. Eriez Xtreme Rare Earth+ Permanent Plate Magnets are the strongest in the industry.

BrutePower - 4-7/8" thick, projects 4 to 5"

BrutePower Ceramic Plate Magnets create a deep magnetic field that will project 4–5" (102–127 mm) into a material burden to remove damaging tramp iron contamination. They are typically used in wood chips processing, sugar cane and other extremely difficult applications.

SuperBrute - 6-3/8" thick, projects 6 to 7"

SuperBrute Ceramic Plate Magnets are typically used in suspended applications to remove large tramp iron from deep product flows in restricted height areas. Typical suspension height is less than 7" (152 mm).

MaxiPower

SuperBrute

SuperPower, MaxiPower, Rare Earth+ & Xtreme RE+

Model	A		B		C		Approx. Weight Per Inch	
	in	mm	in	mm	in	mm	lbs	kg

BrutePower & SuperBrute

Shown with optional flange

Standard plates are available in even inch magnet face width increments, (e.g., 8, 10, 12 inch).

Permanent Plate Magnets

WITH HOUSINGS

FEATURES

- **Ceramic or Rare Earth magnet strengths are available**
- **Minimized overall height for difficult retrofit installations**
- **All welded, mild or stainless steel construction**
- **De-Sta-Co clamps for easy operation and maintenance**

Eriez' Magnetic Humps and Round Pipe Separators provide a simple and effective way to remove tramp iron contamination from gravity or pneumatically conveyed dry, free flowing products such as feed, grain, wood chips, food stuffs, sand or plastic.

Gravity Flow Magnetic Humps

The Gravity Flow Magnetic Hump is used for tramp iron removal where heavy, loose flowing materials are conveyed in vertical gravity flow chutes.

Material enters the Hump and is forced to change direction against the face of a powerful plate magnet. As the material tumbles, it again changes direction and is forced against the face of a second plate magnet. The Hump greatly increases the probability of capturing ferrous material.

The ferrous contamination remains on the face of the magnets until an operator swings the magnet out of the product flow and physically removes it.

Various strength magnets—Rare Earth+, Xtreme Rare Earth+, SuperPower or MaxiPower—can be selected to suit specific application requirements. Magnets are typically hinged to the housing, although on larger units the magnets can be permanently attached with cleanout panels opposite the magnet face for tramp iron removal. Adaptors are optional.

Pneumatic Magnetic Humps

The elimination of tramp iron from materials traveling in pneumatic lines is handled effectively by the Pneumatic Magnetic Hump. The assembly consists of two powerful permanent plate magnets in an enclosed rectangular sheet metal housing. Magnets are hinged to the housing and swing open for cleaning. Standard pneumatic Humps are constructed for installation on the suction side of a blower.

Eriez should be consulted on applications where material is to be blown through a Hump, as special construction may be required to tolerate the expected air pressure. Adaptors can be ordered, which convert any shaped piping or outlet to the rectangular opening of the Hump. Choking is eliminated by increasing the relative area of the Hump in correct proportion to the diameter of the pipe.

Self-Cleaning Humps

Powerful permanent self-cleaning magnets automatically remove tramp iron from free-flowing materials conveyed by gravity in vertical pipes or chutes.

FEATURES

- Tapered step holds small tramp iron
- Self-cleaning cycle time under 15 seconds
- All stainless steel product contact surfaces
- Oversized air cylinders
- Sizes for pipes up to 18-inch (457 mm) diameter

OPERATION

To clean the magnets, product flow is momentarily stopped. A push-button (or optional timer) activates air cylinders which control a diverter gate near the bottom of the unit which closes off the product discharge area and opens a tramp iron discharge chute. Air cylinders then swing the magnets away from the housing, releasing the iron which falls to the diverter gate and out the discharge chute. Pushing the button then reverses the process, resuming normal production in less than 15 seconds.

Round Pipe Separators

The Round Pipe Separator makes the installation of plate magnets in round gravity flow chutes simple and economical.

The assembly is installed by cutting out a section of the chute where magnetic protection is required, and slipping the separator into position. A Neoprene baffle directs the flow directly over the magnet face, which assists in tramp iron removal.

The magnet required will be determined by the application. The assembly is built to accommodate SuperPower, MaxiPower, Rare Earth+ or Xtreme Rare Earth+ magnets.

The Round Pipe Separator features powerful magnetic elements, rugged construction and no operation cost.
